

Rev 2022.02

Efficiency. Quality. Speed. Performance. Outcome.

L200PRO Unit

Starting at \$12,995

The L200PRO takes low-temperature, small kilns to a new level. Nyle's L200PRO model brings the same great technology and drying control as our large kilns. This high-performance dehumidification system offers four different operation modes; traditional DH, Hybrid DH, Heat Treating, and Dump Cycle.

The advanced controller sports an electronic dry bulb and wet bulb sensor. Data logging, scheduling, and remote access are also capable, thanks to the L200PRO's enhanced controls.

The L200Pro comes with four circulating fans, PRO control, and a powered vent kit.

Rev 2022.02

Specifications

Load Capacity	For softwoods and fast drying hardwoods (Pine or Poplar) 1,500 - 2,500 BF, For slow drying hardwoods (Oak) 4,000 BF					
Nominal Water Removal	250 lbs (114 kg) per 24 hours					
Drying Time	4/4 Green Pine - 80% to 8% in approximately 12 days. 4/4 Green Oak - 65% to 8% in approximately 35 days.					
Drying Temperature Range	70° - 120° F (21°- 49° C)					
Heat Treating Capabilities	Auxiliary heater can be used to set the pitch, sterilize the load (kill bugs) and for preheating. (up to 160° F)					
Compressor Nominal HP	2 HP					
Internal Blower Motors	⅓ HP / 1,800 cfm					
Auxiliary Heat	4,000 watts					
Circulating Fans	Four included: 16″ ⅓ HP / 1,800 cfm					
Over Temperature Vents	One power vent system included					
Power Requirements	240V single phase, 60 Hz, Dedicated 100A Required					
Shipping Weight	420 lbs					
Dimensions (H x L x W)	37" x 32 ½" x 20 ½" (base unit only)					

L200Pro Accessories:

Fan Kit: Fully automated fan kit includes 16" housings, fan blade, ¹/₃ HP motor, and motor starter.

Chamber/Container Kilns:

Prefabricated chamber and container packages available.

DH Mode

This mode is more suitable for drying slow drying hardwoods like oak. In this mode the kiln is controlled according to traditional DH operation.

Hybrid Mode

This mode is more suitable for faster drying species. In this mode the kiln is controlled more according to traditional / conventional drying practice.

Heat Treat Mode

In this mode when target temperature (settable) is reached and maintained for required time (settable) the kiln stops automatically
